

**AMENDMENTS TO THE SPECIFICATION**

**Please delete the present Abstract of the Disclosure.**

**Please add the following new Abstract of the Disclosure:**

A dose indicator (A) for a fluid dispenser device (B) that includes a rotary counting wheel (10) that is displaceable in rotation, and a slide member (20) that is displaceable in translation. The counting wheel includes an indicator (15), indicating the number of doses dispensed or the number of doses still to be dispensed, and co-operating with a display opening (25) provided in the slide member (20). The rotary counting wheel (10) includes a hollow profile (18) co-operating with a projection (28) of the slide member (20), the shape of the hollow profile (18) being such that at least some rotations of the rotary counting wheel (10) cause the slide member (20) to be displaced in translation, thereby modifying the position of the slide member (20) relative to said counting wheel (10).
